

Kenya

ABC

Classic notes of Blackcurrant, Orange and Honey for this traditional fully washed style coffee.

Coffee operations for Sasini include coffee growing and forestry. Coffee is grown on six independent estates; Doondu, Ruiru Mills and Gulmarg estates in upper Kiambu, Kamundu, Ting'ang'a and Kakindu estates in Lower Kiambu and Mweiga across the border in Nyeri. Altogether these cover a total of 775 Hectares (1,915 acres) under coffee.

Collectively, the plantations have a capacity to produce an average of 1200MT of coffee annually. The coffee plantations are specifically situated in Kiambu County near Nairobi and Nyeri on the foothills of Mount Kenya.

Ninety percent is exported directly to overseas roasters and trade houses across Europe, Asia and America while the balance is offloaded through the Nairobi Coffee Exchange.

Sasini have maintained traditional coffee varieties including SL28, French mission (SL34), K7, Blue Mountain, grafted Ruiru 11 and Geisha. Each estate has its own pulping and wet processing facility. The mill is able to mill our own coffees including other farmers' coffees. The mill has a daily capacity to produce 3,200 bags of green coffee. This constitutes about 20% of Kenya's total coffee production.
